
Orthopaedics booklet

Version 1 - December 2012

MEDLANE®

Orthopaedics booklet

All the products described in this booklet have the compulsory CE marking.

Wire drill forceps
(Stainless steel thread)

Frontal and side cutting forceps with Tungsten small plates - 180 mm - Ø 1,6 mm

	K001

Pair of spare small Tungsten plates for reference K001

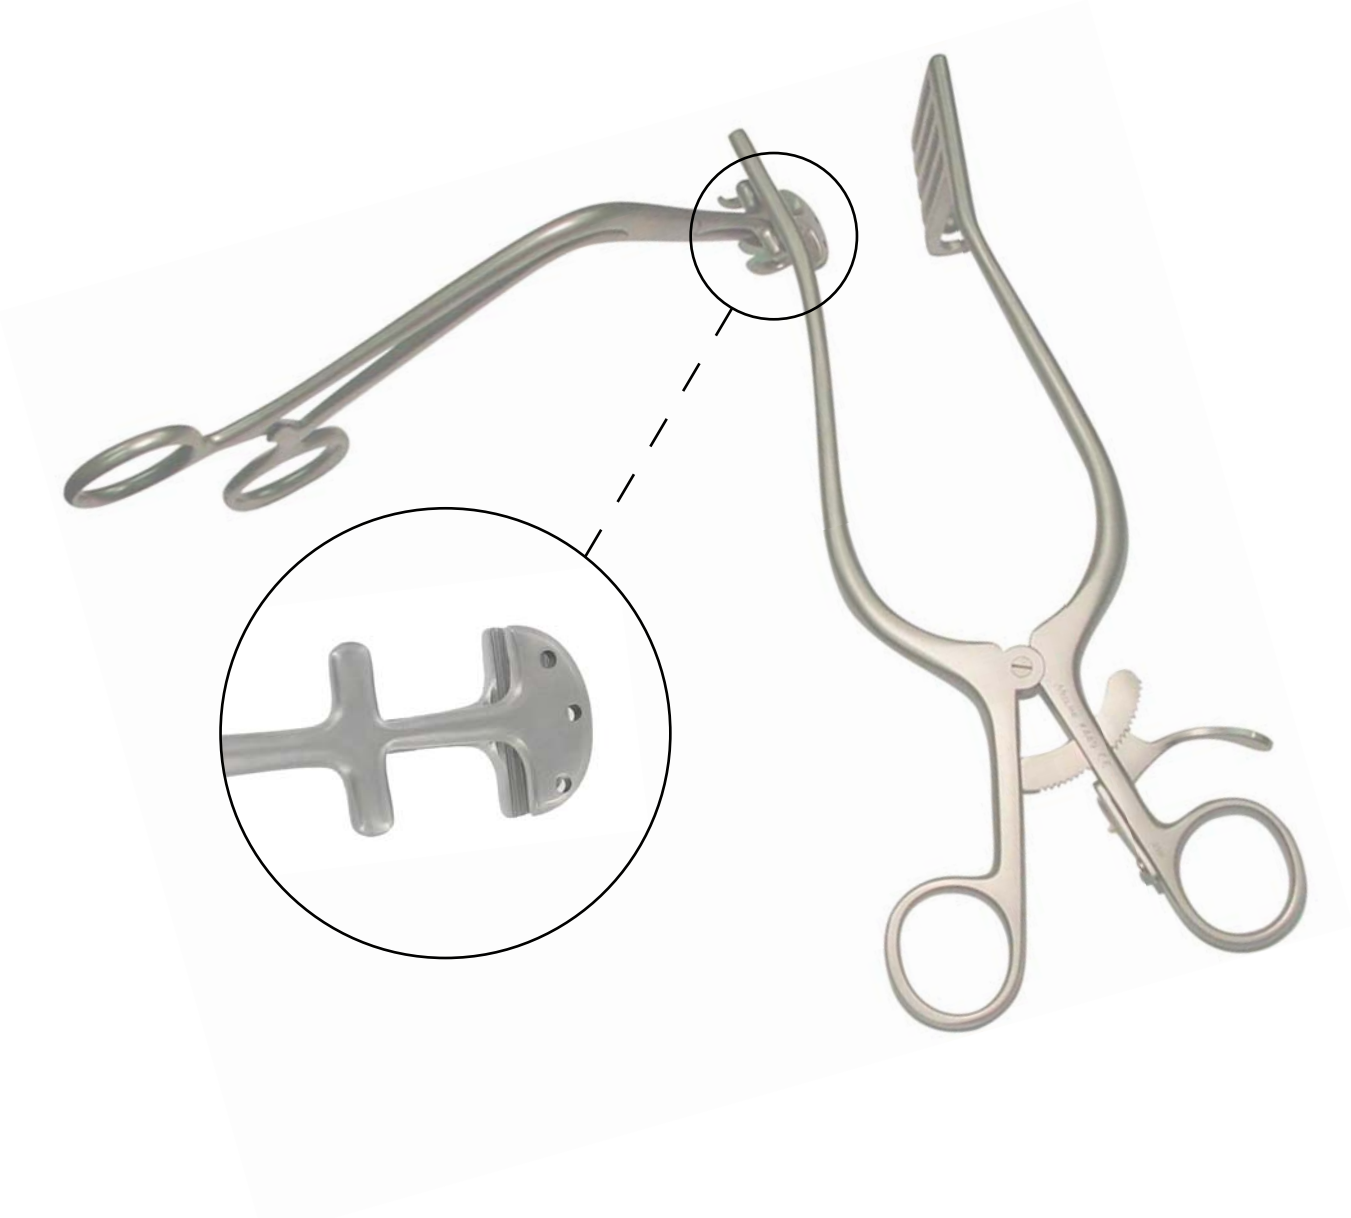
	Reference
with key	**K002**

Pin extraction forceps with Tungsten small plates - 180 mm

	Reference
3 mm jaw	**K003**
6 mm jaw	**K004**

Mac Kee hip retractor

For total hip prothesis implementation with preservation of the articular capsule.



Mac Kee autostatic retractor with teeth	Reference
Right forceps holders	**K 449**
Left forceps holders	**K 450**

Capsule forceps	Reference
Small-sized model	**X 636**
Big-sized model	**K 874**

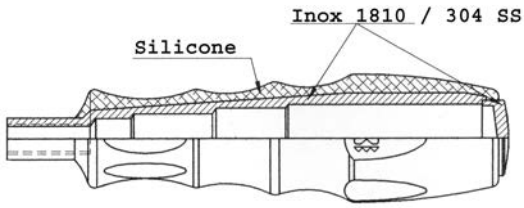
Stainless steel automatic universal chucks with T handle

Automatic - without any screw key

K287

Softgrip® handle hammers

Weight	Reference
700 grams	**SP160**
900 grams	**SP161**

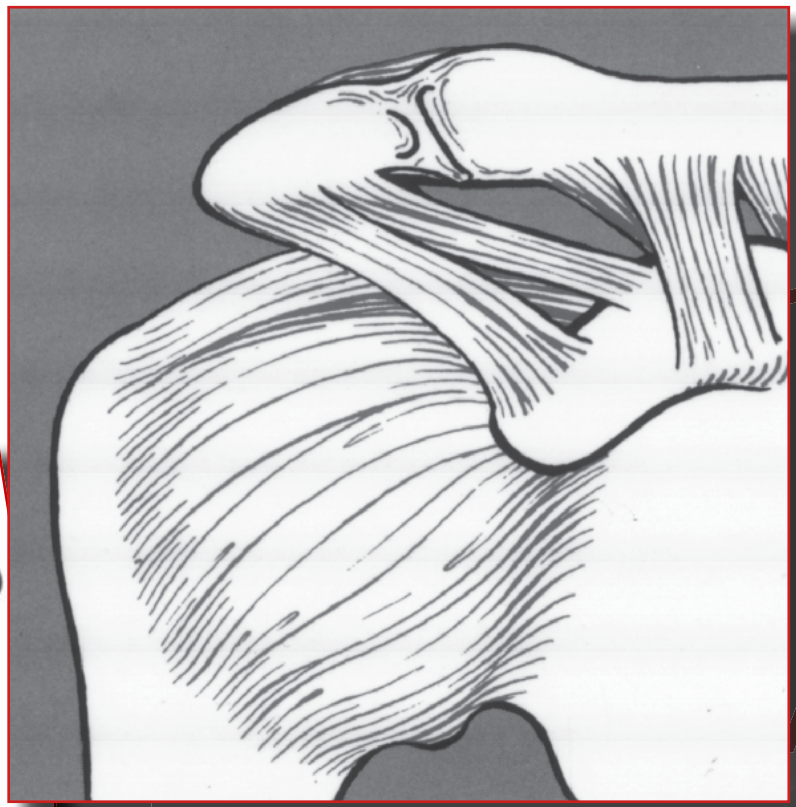


Softgrip® Handle **(Patented Model)**

- MADE IN SILICONE TO ABSORB VIBRATIONS
- COMFORT AND ERGONOMICS: A very comfortable and safe handling, even in damp environment
- MORE PRECISION: Anti-kickback system to allow for a clear and well controled shock
- SCREWING AND WELDING ASSEMBLY: to allow for an easier potential repair
- EXCELLENT CHEMICAL RESISTANCE
- STEAM STERILIZATION : At 170°C maximal temperature

Modified Bankart Shoulder Instrumentation

For the capsule fixation in case of recurrent anterior shoulder dislocation.



Complete autostatic tissue retractor

with 3 pairs of valves

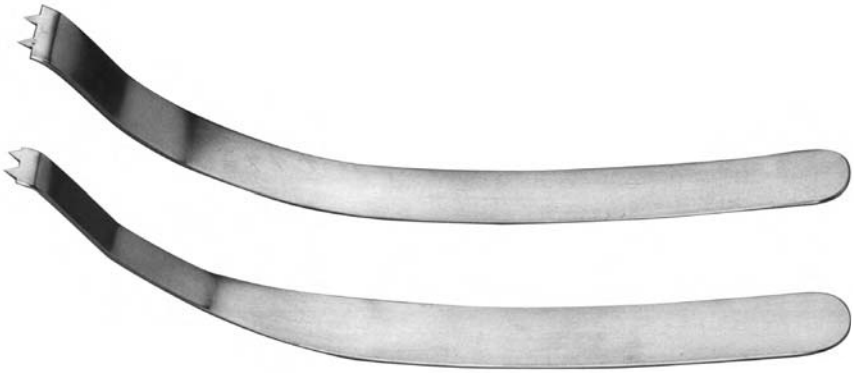
X318

Humeral head retractor- Fukuda

N014

N855

Capsule retractor for pushing the muscle away



Width	Reference
20 mm	**N857**
15 mm	**N856**

Autostatic tissue retractor

	Reference
2 x 2 teeth	**N723**

Teeth depth	Reference
40 mm	**N719**
60 mm	**N720**

	Reference
1 x 1 teeth	**N722**

	Reference
1 x 1 teeth - very curved	**N854**

Hook with incus

to perforate the glenoidal cavity

Curve	Reference
small	**N858**
medium	**N859**
big	**N860**

Hook

to draw suture threads

N861

Hook

to finish the canals of the glenoidal cavity

N862

Still gouge forceps with incus

for cortical

N863

Perforating forceps

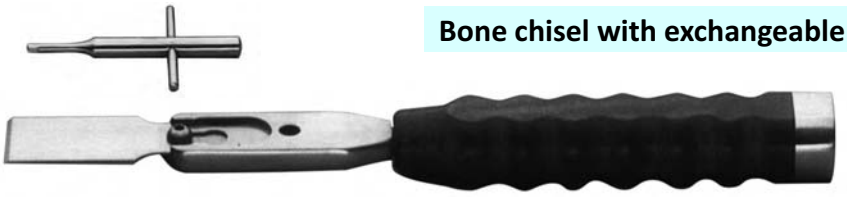
to make the canals larger

N864

Humeral head lever

	N865

Bone chisel with exchangeable blades



Handle alone with key	**SP077**

Blades	Reference
width 5 mm	**SP070**
10 mm	**SP071**
16 mm	**SP072**
25 mm	**SP073**

Hammer

	258 07

Double articulation bone rongeur - 190 mm - Jaw 5 mm

	328 02

Simple articulation bone rongeur - 170 mm - Jaw 4 mm - very curved

	332 05

Up-cut notched scissor - 170 mm - curved

UC 4332

Dissecting forceps with platform - 200 mm

310 05

Mayo Hegar Needle holders - 180 mm - Tungsten

402 03

Needle holders - 210 mm - Curved - Tungsten

N866

Stainless steel container - 600 x 300 x 160 mm (without any lid cover)

BE022

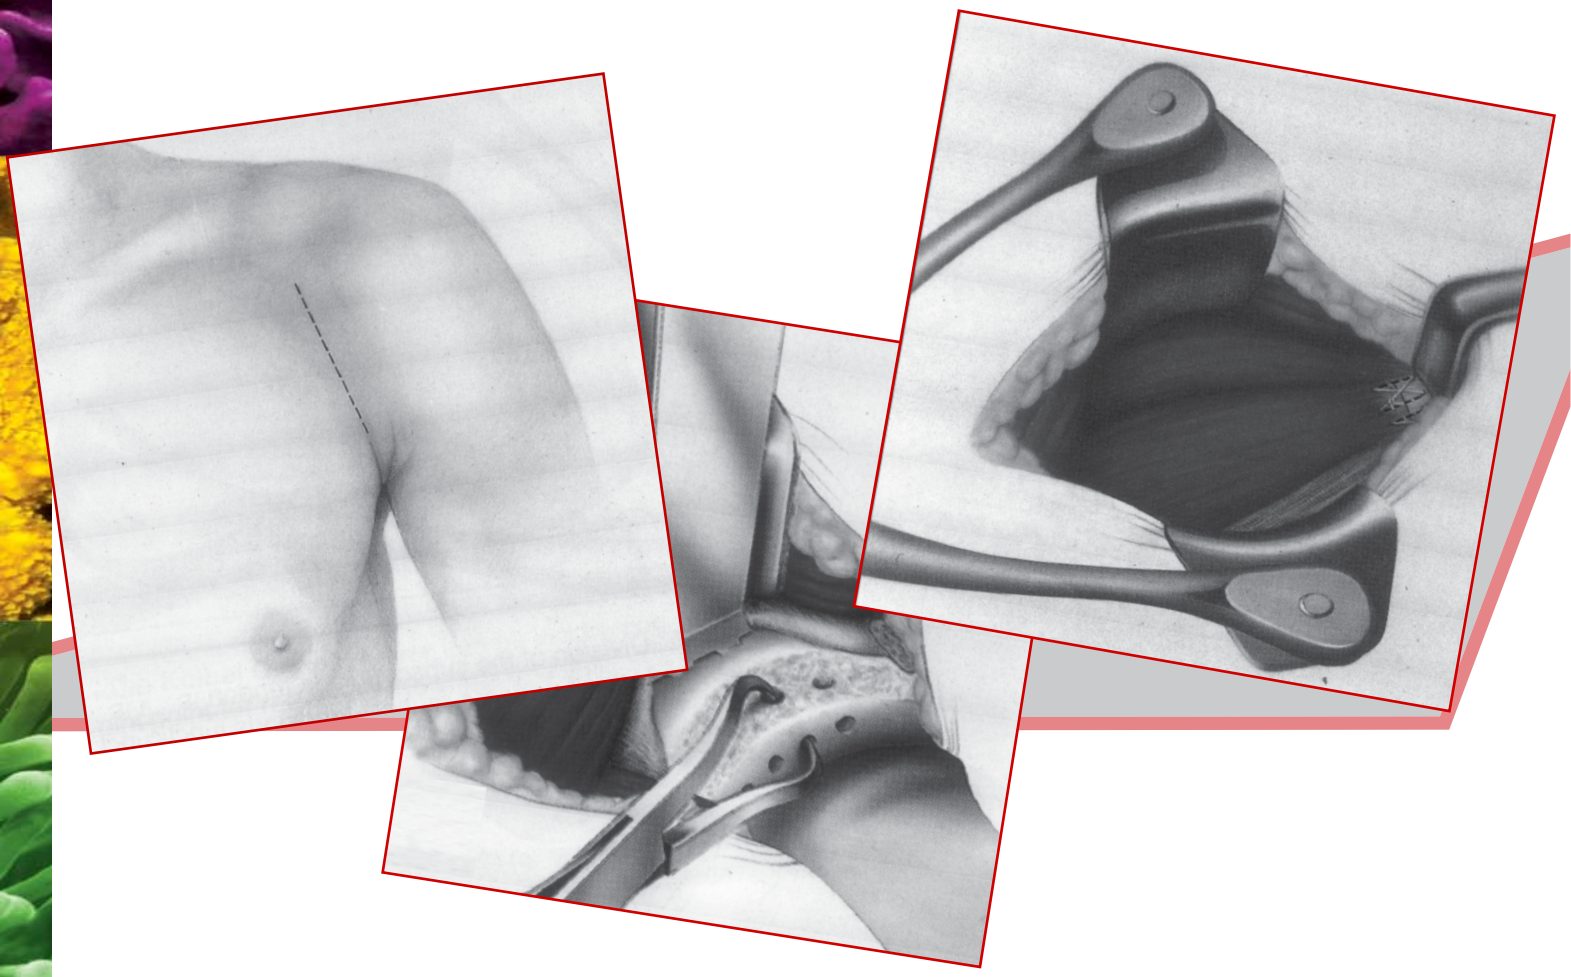
Stainless steel lid cover

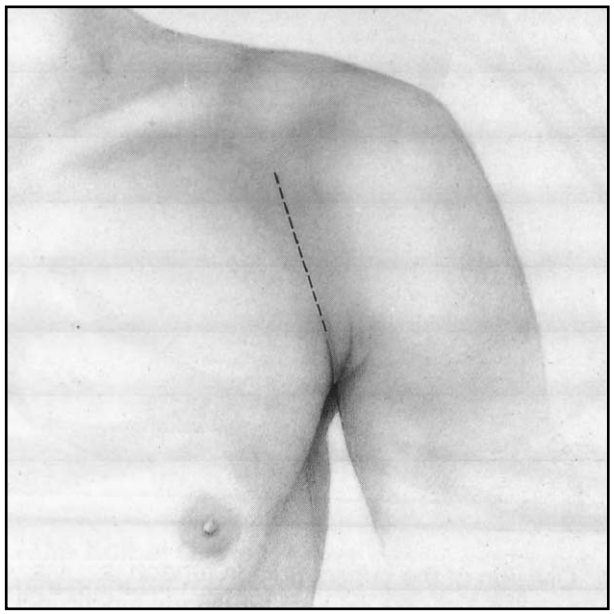
B279

Stainless steel perforated basket

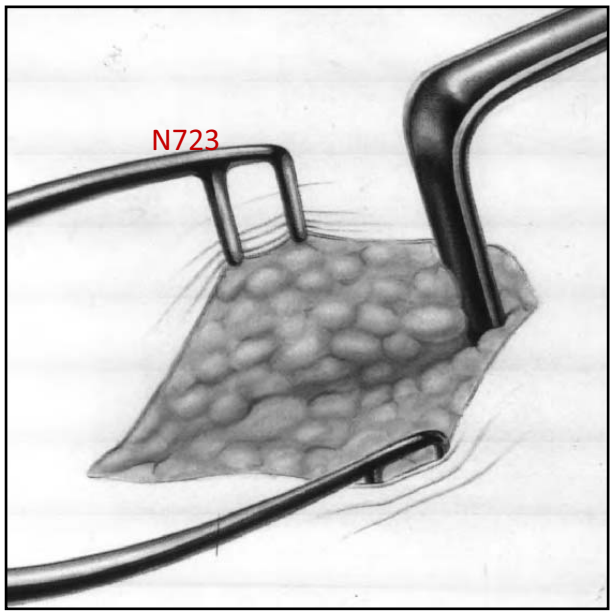
B389

Surgical technique

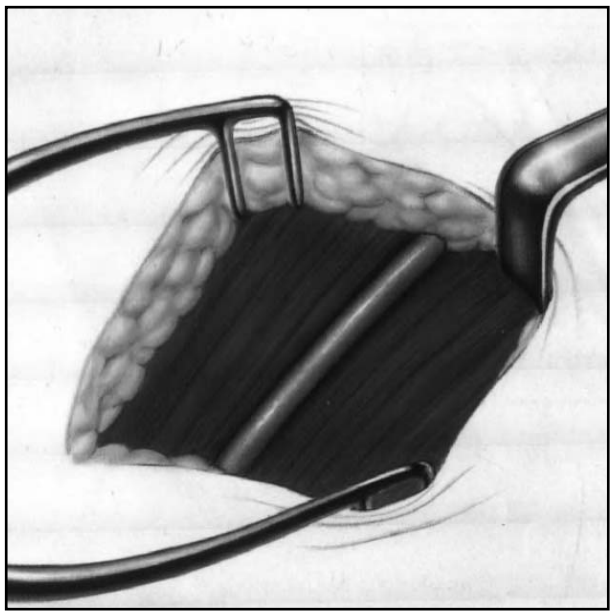




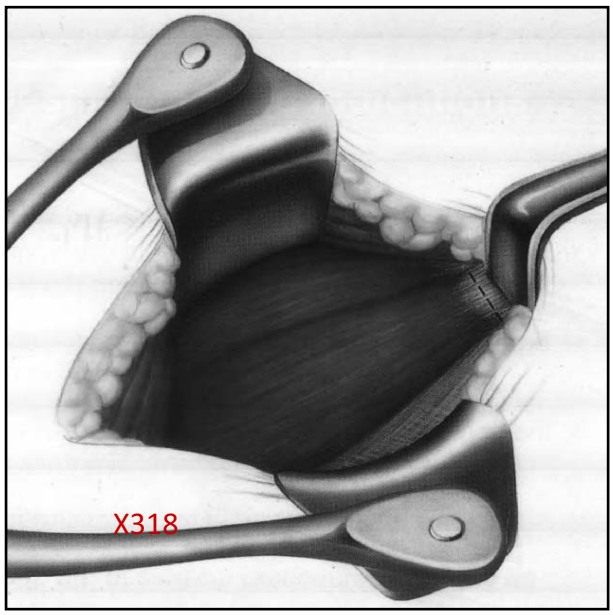
A - Incision between the coracoid process and the axil bend



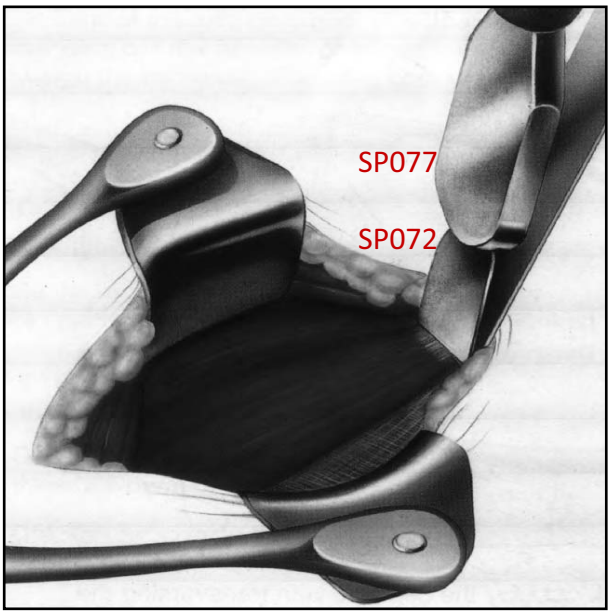
B - The operation begins with the use of an autostatic tissue retractor N723



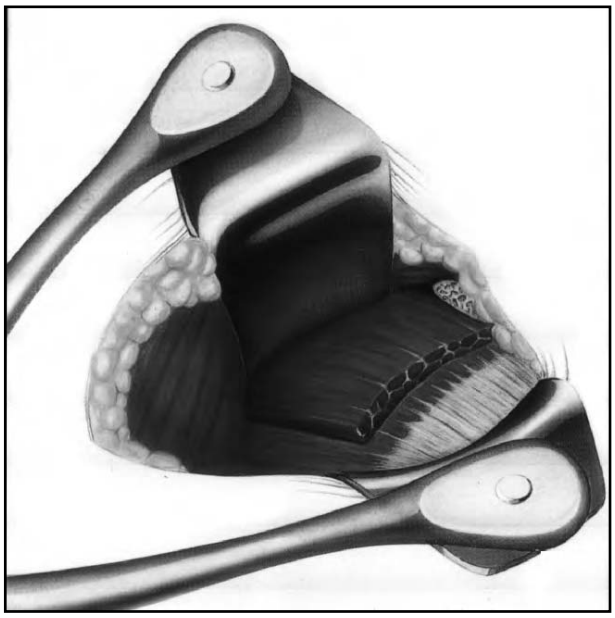
C - The cephalic vein can temporarily be ligatured and severed



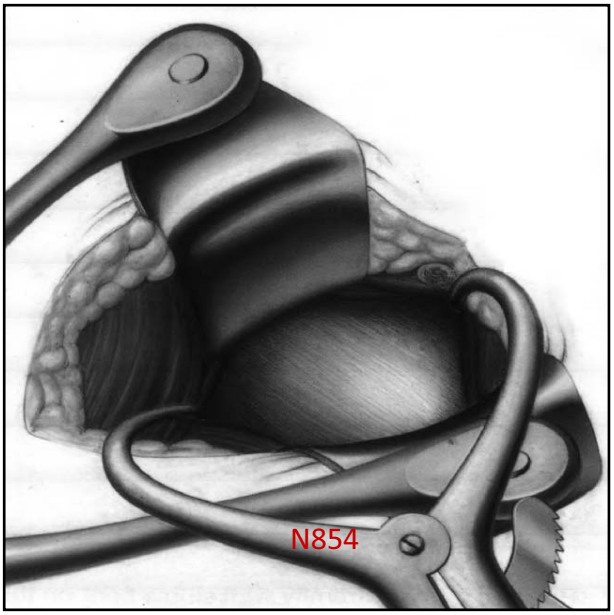
D - The autostatic tissue retractor X318 with rotating valves is used to maintain the tissues open



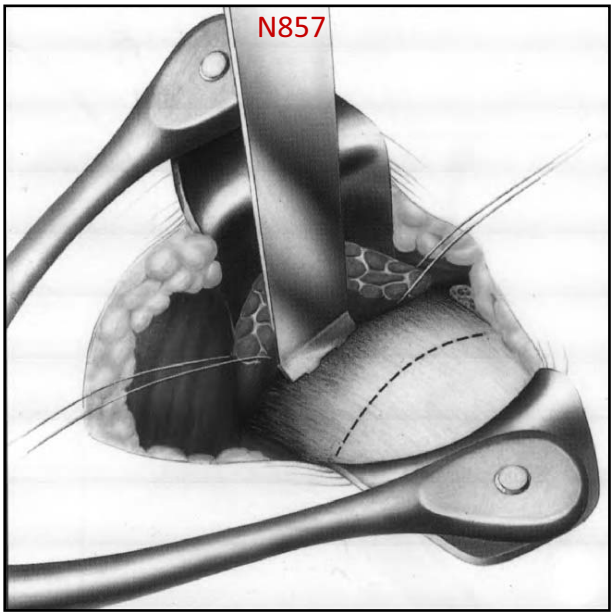
E - The coracoid process is osteotomized with the bone rongeur SP077 (handle) and SP072 (blade)



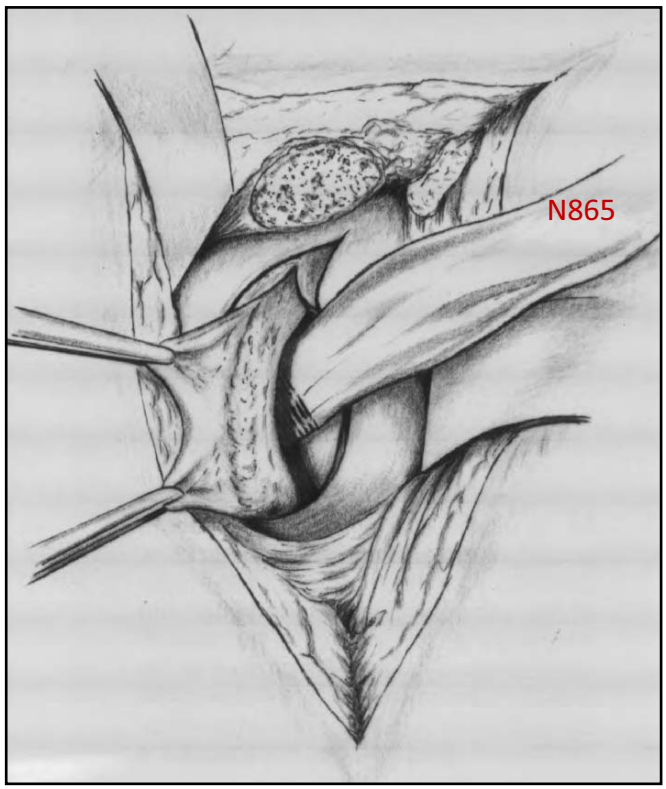
F - Division of the subscapular tendon near the musculotendinous junction



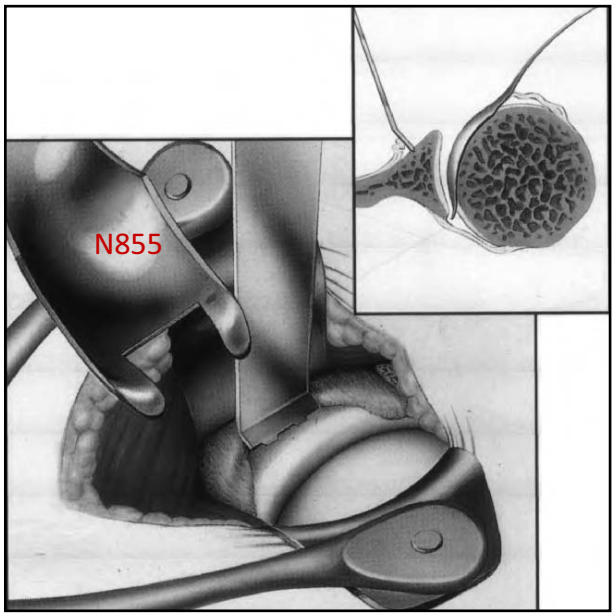
G - The autostatic tissue retractor N854 is specifically adapted to the divided tendon space



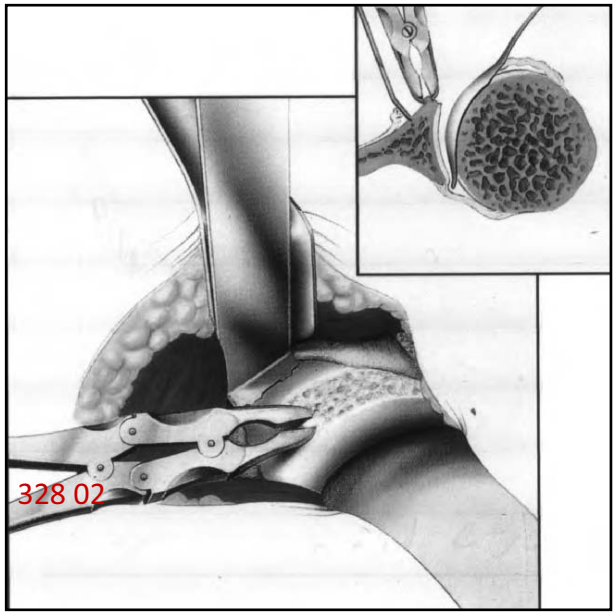
H - The muscle is maintained by means of the capsule retractor N857 with teeth



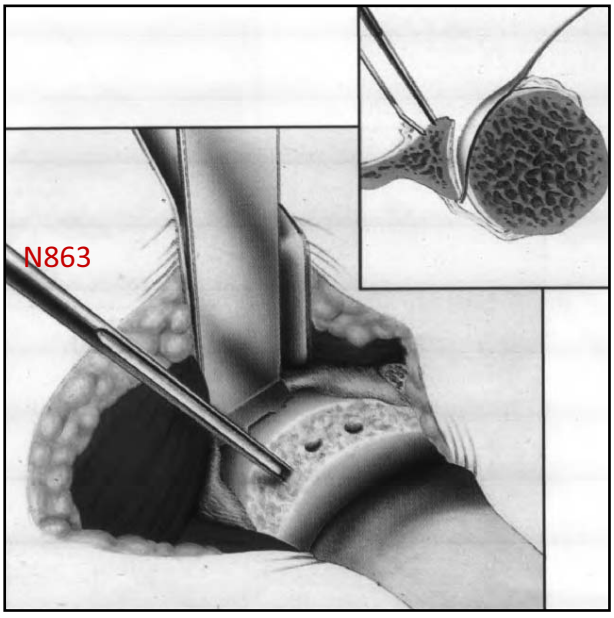
I - Humeral head lever N865 is placed beetwen the head and the glenoidal cavity



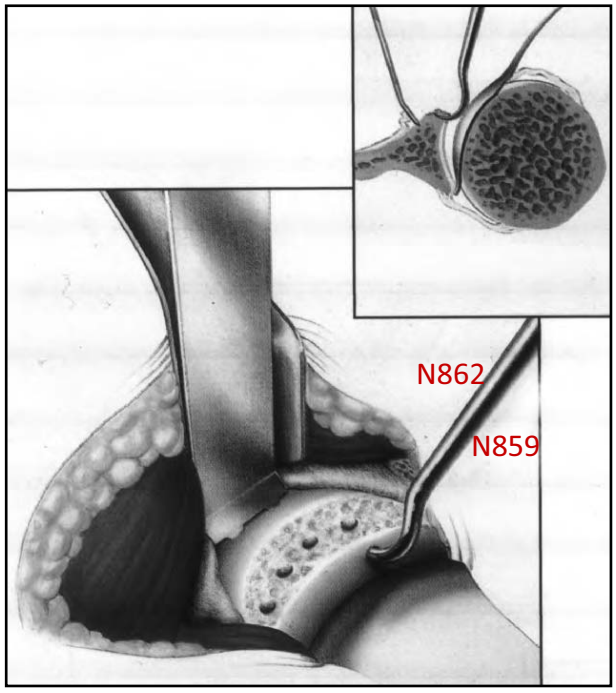
J - The humeral head retractor N855 is then introduced



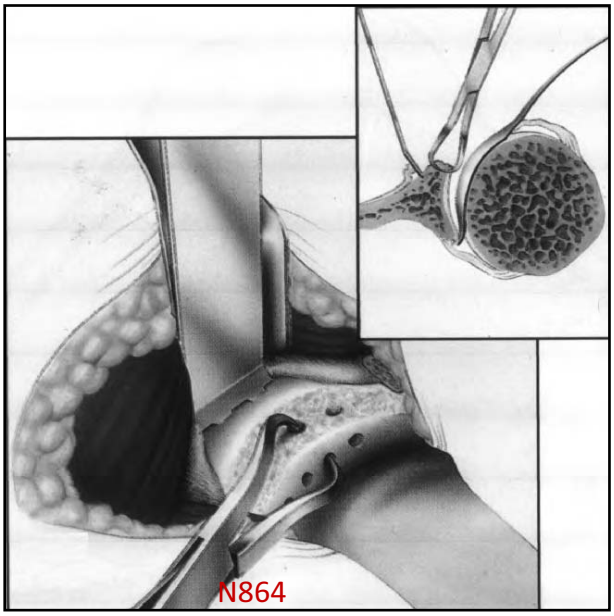
K - **Double articulation bone rongeur** 328 02 is used to relieve the glenoidal fold of soft tissues



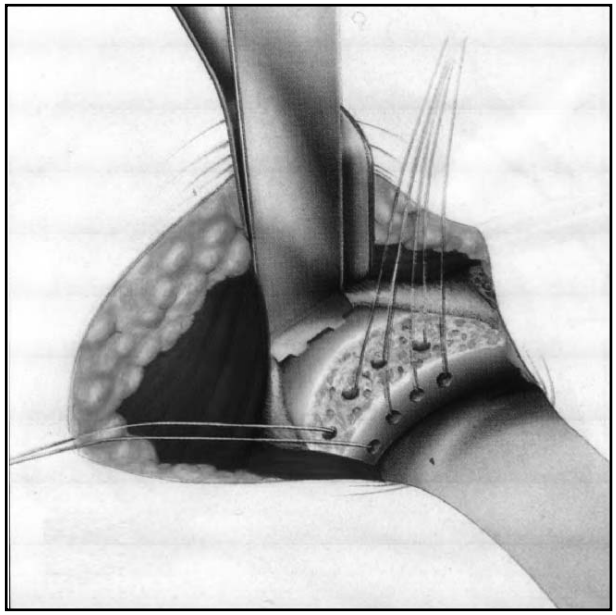
L - **Still gouge forceps with incus** for cortical N863 is used to drill fore holes through the glenoidal fold



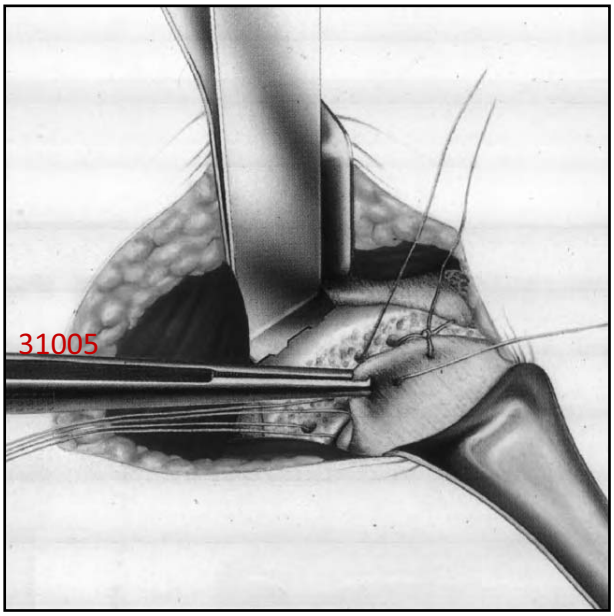
M - Bone canals in the glenoidal cavity are perforated by the hook with incus N859 and are finished with the hook N862



N - The perforating forceps N864 is used to make canals larger



O - The suture thread are sorted with the hook N861



P - **The dissecting forceps with platform** 310 05 is useful when the suture threads are being put
